Score

Your scale score is **324** on this attempt. Your probable range is **282 to 366**.

The stars on the graph indicate the overall scale score for each category. The entire blue bar indicates the probable score range determined by the standard error of measurement. This range will contain the student's 'true' score approximately 100% of the time.

The current level of **Jennifer Lewis's** scaled score of **324** represents: **Competent**.

The participant at the Competent level perceives the scenario in its totality rather than piecemeal. The Competent learner realizes from frequent and learned experiences that a plan of care may need to be modified in response to changes in condition. The participant synthesizes the important aspects in this scenario and uses sound process to improve decision-making. A Competent participant's skills are well developed and respond effectively to unexpected experiences.

Survey Responses

Was this a realistic learning experience?

✓ A very realistic mannequin and in-depth scenario.

Did this experience improve your self-confidence?

✓ This was a good test of my clinical abilities.

Did this experience better prepare you to work in a clinical area?

✓ A good refresher before going into a new clinical unit.

Did this experience improve your ability to collaborate with healthcare team members?

✓ My team members responded to my questions and requests.

Did this experience reinforce your knowledge?

✓ Good review!

Will this experience improve your patient care?

✓ Gives me more confidence at the bedside.
